Methodology

Between April 20th and April 25th, 2004, SES conducted a total of 1,000 telephone interviews across Canada with eligible voters as part of the SES National Quarterly Omnibus. Aggregate results of the survey are accurate ± 3.1%, 19 times out of 20. Validation of the demographic profile of respondents indicates that the poll is a fair representation of Canadian voters.

The May 30th results are based on the CPAC-SES nightly tracking. It includes 1,000 interviews completed between May 26th and May 30th, 2004. The margin of accuracy is ± 3.1%, 19 times out of 20

The margin of accuracy for each region is identified at the bottom of each regional column.

The sample is representative of the Canadian electorate both geographically and demographically.

Readers should also note that percentages may not add up to 100 due to rounding. Both polls were registered with the Canadian Survey Research Council of which SES is a member.

About SES

Established in 1987, SES Canada Research Inc. is a full service public opinion research and management consulting firm. For more information on our full range of services please visit our website www.sesresearch.com. Media inquiries should be directed to:
